

Really Quick 3-4 Step Spheres.

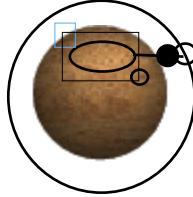

Create 2 identical circles and fill the back one with black. Other colours work as well but for this exercise we'll use black

Align the two circles so that your foreground colour is on the top.

Now, use either a directional transparency (left) or an elliptical Transparency (right) to get the look you're after.

To change the colour or texture of your sphere you only have to change the colour of the top circle. To add the glassy look, just add a smaller white circle on top with a directional fade applied.
